A postal system was an essential part of the Inca Road, with relay runners called chasqui stationed along the road at .8 mi (1.4 km) intervals. Information was taken along the road either verbally or stored in the Inca writing systems of knotted strings called quipu. In special circumstances, exotic goods could be carried by the chasqui: it was reported that the ruler Topa Inca (ruled 1471-1493) could dine in Cuzco on two-day-old fish brought in from the coast, a travel rate of about 150 ...

Inca Road System - 25,000 Miles Connecting an Empire

The Inca road system was the most extensive and advanced transportation system in pre-Columbian South America. It was at least 40,000 kilometres long. The construction of the roads required a large expenditure of time and effort. The network was composed of formal roads carefully planned, engineered, built, marked and maintained; paved where necessary, with stairways to gain elevation, bridges and accessory constructions such as retaining walls, and water drainage system. It was based on two nor

In its heyday, the Royal Inca Highway was an extraordinary feat of engineering. Meriting comparisons to the Great Wall of China, legend has it that the route was built not by men, but by the gods. An essential component of the far-flung Inca Empire, the original course of the 3200 mile Inca Road remains a source of speculation. Along the Inca Road is the dramatic account of Karin Muller's seven-month adventure following and documenting her experiences along these ancient routes.
