Two triangles are congruent if they are exactly the same size and shape, which means they have the same angle measures and the same side lengths. If we know that all the sides and all the angles are congruent in two triangles, then we know that the two triangles are congruent. <https://study.com/academy/lesson/congruence-in-overlap>

The SAS (Side-Angle-Side) postulate states that if two sides and the included angle of one triangle are congruent to two sides and the included angle of another triangle, then the triangles are congruent. (The included angle is the angle formed by the two sides.) The following figure illustrates this method. Check out the SAS postulate in action:
