is located between the lungs, in the middle compartment of the chest.

### **Heart - Wikipedia**

You can estimate your maximum heart rate based on your age. To estimate your maximum age-related heart rate, subtract your age from 220. For example, for a 50-year-old person, the estimated maximum age-related heart rate would be calculated as  $220 - 50 \text{ years} = 170 \text{ beats per minute (bpm)}$ . The 64% and 76% levels would be:
