The first type of interlocking mechanism is a simple pin and cavity. The second type of interlocking design you'll learn about is the dovetail mechanism. A dovetail mechanism is the same design used to attach puzzle pieces together. Dovetails are flexible in their shape and significantly improve the bonding strength of separate components.

A mechanical puzzle is a puzzle presented as a set of mechanically interlinked pieces in which the solution is to manipulate the whole object or parts of it. One of the most well-known mechanical puzzles is Ernő Rubik's Cube that he invented in 1974. The puzzles are mostly designed for a single player where the goal is for the player to see through the principle of the object, not so much that they accidentally come up with the right solution through trial and error. With this in mind ...
