McPherson Strut Suspension ADAMS model

MacPherson strut suspension is a simple independent suspension design used by just about every mainstream car maker in the world, normally for front wheels. It's based around a basic triangular...

What Is MacPherson Strut Suspension And Why Is It So Popular?

Analysis of the dynamics of passenger cars with McPherson strut suspension systems in the MSC.ADAMS software environment with taking into account the friction in shock absorbers 41 Fig. 2. Construction of a shock absorber in the McPherson strut suspension system. friction may even result in temporary self-jamming of the piston rod in the cylinder.

ANALYSIS OF THE DYNAMICS OF PASSENGER CARS WITH MCPHERSON ...

Adams is the world's most widely used multibody dynamics simulation software. It lets you build and test virtual prototypes, realistically simulating on your computer, both visually and mathematically, the full-motion behavior of your complex mechanical system designs.

Strut mount is one of the important interconnected parts of McPherson suspension system, which undergoes through high forces which are generated due to road bumps and most probably tends to fail. Strut mount insulates the tire noise and vibration from the vehicle and it is the mounting point to connect vehicle chassis.

Literature review on analysis of various Components of ...

The MacPherson suspension, used as front suspension on the car model, includes the lower arm, the shock absorber (body and rod), the steering arm and a chassis to fix properly all the components. The lower arm is coupled to the chassis using a rotational joint and to the shock absorber body using a spherical joint.
